Series

PRO70

Cardioid Condenser Lavalier Microphone

Features
• Clip-on lavalier mic provides articulate, full-sounding voice pickup
• Also excels as an instrument mic, especially for pickup of acoustic guitar with included AT8444 instrument adapter
• Cardioid polar pattern reduces pickup of sounds from the sides and rear, improving isolation of desired sound source
• Offers the convenience of battery or phantom power operation
• Rugged design and construction for reliable performance
• Switchable 80 Hz high-pass filter minimizes pickup of undesired low-frequency sounds

Description
The PRO70 is a miniature clip-on/lavalier condenser microphone with a cardioid polar pattern. It is designed for quality sound reinforcement, professional recording, television and other demanding sound pickup applications.

The microphone is intended to be worn on the clothing or used as an instrument mic for excellent yet unobtrusive sound pickup. The wide-range capability of the microphone ensures clean, accurate reproduction with high intelligibility for speakers and presenters as well as for instrument pickup. Its small size makes it ideal for use in applications where minimum visibility is required.

The microphone requires 11V to 52V phantom power or a 1.5V AA battery for operation. A battery need not be in place for phantom power operation.

Output is low impedance (Lo-Z) balanced. The signal appears across Pins 2 and 3; Pin 1 is ground (shield). Output phase is “Pin 2 hot”—positive acoustic pressure produces positive voltage at Pin 2.

Operation and Maintenance
To install the battery, remove the cap from the top of the power module. Insert a fresh 1.5V AA battery (“+” end toward the cap release button), then reassemble the power module. For longest battery life, the switch should remain off except when the microphone is in use. Alkaline batteries are recommended for longest life. Remove the battery during long-term storage.

To avoid phase cancellation and poor sound, all mic cables must be wired consistently: Pin 1-to-Pin 1, etc.

A 3-position switch in the power module permits choice of off, on/flat response, or on/low-roll-off (via integral 80 Hz high-pass filter). The roll-off position reduces the microphones sensitivity to popping in close vocal use. It also reduces the pickup of low-frequency ambient noise (such as traffic, air-handling systems, etc.), room reverberation and mechanically coupled vibrations. To engage the filter, slide the switch toward the “bent” line. To turn the microphone on without engaging the filter, slide the switch toward the flat line.

For use as a lavalier, attach the microphone about six inches below the chin. Anticipate movements that may cause the microphone to rub against or be covered by clothing, and position the microphone to avoid it.

Avoid leaving the microphone in the open sun or in areas where temperatures exceed 110° F (43° C) for extended periods. Extremely high humidity should also be avoided.

Architect’s and Engineer’s Specifications
The microphone shall be a fixed charge condenser. It shall have a cardioid polar pattern and a frequency response of 100 Hz to 14,000 Hz. The microphone shall operate from an external 11V to 52V DC phantom power source or, alternatively, from a 1.5V AA/UM3 battery. It shall be capable of handling sound input levels up to 123 dB (phantom and battery) with a dynamic range of 96 dB (phantom and battery). Nominal open-circuit output voltage shall be 5.6 mV (phantom) and (battery) at 1 V, 1 Pascal. Output shall be low impedance balanced (200 ohms—phantom and battery).

The microphone shall have a 1.8 m (6’) permanently attached miniature cable connected to the power module. The power module shall house the battery, and shall contain a switch that permits choice of off, on/flat response or on/low-roll-off (80 Hz). The output of the power module shall be a 3-pin XLRM-type connector.

The microphone shall be 25.0 mm (0.98”) long and have a diameter of 10.2 mm (0.40’). Weight shall be 8 grams (0.3 oz). The microphone shall include a power module, a clothing clip, a windscreen, a battery, an instrument adapter and a protective carrying case. Finish shall be low-reflectance black.

The Audio-Technica PRO70 is specified.
